

Users With Pets

This project fetches user data from external RandomUser API and DogImage API, aggregates them in a Spring Boot backend, and displays the final result in a React + Vite frontend.

- List of users with pet images
- User card contains user information
- Pagination
- Filtering

Users & Their Pets

Browse users from different countries and see their beloved pets

Filter by Country: Number of Users: Showing 12 users

A screenshot of a web browser window showing the application's back-end API endpoint at 'localhost:8080/api/users-with-pet?count=53'. The page title is 'Pretty print' with a checked checkbox. The content area shows a large JSON array of user objects. Each object includes fields like 'country', 'dob', 'date', 'age', 'email', 'gender', 'id', 'name', 'petImage' (with a yellow highlight), and 'phone'. The 'petImage' field contains URLs for dog images. The JSON is formatted with indentation and line breaks for readability.
